EXPERIENCE

Career Pause (Family Care) June 2024 - May 2026

Actively seeking a full-time PM role. See **PROJECTS** section for recent work.

Illumina, Inc., San Diego, CA 2018 - 2024

The global leader in DNA sequencing and genotyping technologies

Senior Process Engineer – Acting Platform Product Manager Jan 2023 - June 2024

- Recruited internally to design and deliver a new data analytics platform, driving 55% yield improvement and \$14M annual cost savings, directly enabling the “\$200 genome” with NovaSeq X
- Secured and managed resourcing (data engineer, data scientist, product engineers) for 9-month, 4-phase data platform project – aligning product team around scope, roadmap, and success criteria
- Resolved persistent data tool issues by bridging historically siloed engineering teams and shifting team culture from reactive firefighting to proactive troubleshooting
- Owned launch of novel microfluidics process – from tool design through recipe development and documentation
- Managed \$1.2M capital investment decision by drafting requirements that translated complex stakeholder needs into clear vendor specifications and evaluating 7 global vendors on technical and business tradeoffs

Process Engineer II July 2020 - Dec 2022

- Led automation software development from conceptualization through launch, enabling product team to deliver 45% throughput improvement, which protected \$40M in at-risk revenue
- Created wireframes, touchpoint agreements, requirements and specs, and testing protocols by synthesizing team input
- Designed tooling and IoT sensor-based equipment health monitoring to support new automated workflow
- Managed a 5-person team supporting high-power laser etching – the bottleneck process in a 24/7 manufacturing line – increasing capacity 34% through data-driven prioritization
- Built Tableau dashboards for product and equipment health monitoring, saving ~5 engineer hours per week and improving data-driven triage of production issues

Process Engineer I Sep 2018 - June 2020

- Owned sub-module risk management – identification, prioritization, mitigation – to secure FDA diagnostic approval
- Generated \$600K in annual savings by introducing process improvements across two manufacturing sites; analyzed 20M+ sample datasets to justify changes and validate performance
- Designed and executed structured experiments (DOE) to isolate root causes and quantify the impact of process parameter changes, translating ambiguous tool issues into validated, actionable improvements

EDUCATION

University of California, San Diego June 2018

Bachelor of Science, **Bioengineering**

PROJECTS

EasyStride | Independent Project Dec 2025 - Present

- Designed and prototyped wearable capturing real-time running gait biomechanics for female runners with a history of injury – defined stories, requirements, MVP, and early-to-late-stage product phases/versioning
- Interviewed potential users, surfacing needs and motivations, to prioritize features on customer value vs technical effort

Virtual Cell Challenge | Data and Biology Lead Jul 2025 - Nov 2025

- Sourced, cleaned, and summarized data for 4-person team building an ML model to predict epigenetic cell states

ADDITIONAL

Skills: Python, SQL, Tableau, R, Figma, Lucidchart, Jira, Asana

Hobbies/Interests: Running, Swimming, Yoga, Hiking, Climbing, Ceramics, Wine (WSET Level 2), Sustainability
